SUMMARY

Final year B.Tech Computer Science student with hands-on experience building and deploying full-stack applications using Flask, ReactJS, and Docker. I've taken projects from scratch to production including REST API design, database integration, and cloud deployment on Render. Skilled in Python with practical exposure to deep learning integration, backend architecture, and debugging complex systems. Solved 160+ DSA problems on LeetCode with a focus on patterns and problem-solving efficiency.

EDUCATION

Acharya Nagarjuna University College of Engineering and Technology, Guntur
Bachelors of Technology in Computer Science and Engineering

Aug 2022 - June 2026
CGPA – 8.1/10

SKILLS

Testing & Validation: Unit Testing, Functional Testing, Test Automation, Test Case Design, xUnit, Mocks & Stubs, Test Scripts, Defect Identification & Documentation, Code Coverage

Languages: C, C++, Python, Java, JavaScript, SQL, Bash/Linux scripting

Tools & Infrastructure: Git, Docker, Linux, CI/CD pipelines, Postman (API validation & automation), Log monitoring, Error metrics

Practices: Agile/Scrum, SDLC, OOAD, Design Patterns, Technical Documentation, Code Reviews

EXPERIENCE

Intern – RINL (Rashtriya Ispat Nigam Ltd) (Visakhapatnam, India)

May 2025 – Jun 2025

- Owned backend components of a digital document verification portal in a product development project, writing user stories, breaking them into tasks, and collaborating in a 10-member Agile/Scrum team to deliver results end-to-end.
- Automated the applicant verification workflow end-to-end, cutting processing time by 60% and securely handling 500+ documents and documented technical specifications.
- Monitored system logs and error metrics to identify root causes of defects, improving reliability through structured validation checks, code documentation, and actively participated in code reviews, providing constructive feedback to improve reliability and performance.

Web Development Internship – OctaNet Services Pvt. Ltd (Remote)

Jun 2024 – Jul 2024

- Debugged and resolved layout and rendering defects using browser developer tools, systematically identifying failure points and validating fixes across multiple test scenarios.
- Wrote and executed functional test scenarios for interactive UI features, ensuring stable and consistent application behaviour across user actions and dynamic updates.

PROJECTS

DFU Classifier - Diabetic Foot Ulcer Detection Web App <https://github.com/PavanSai008/DFU>

- Designed and implemented a hybrid diabetic foot ulcer detection system using object-oriented design principles, combining EfficientNetB3 for image classification with a clinical rule engine for ischemia risk scoring based on patient vitals like ABI and SpO2.
- Developed a Flask-based REST API service that accepts wound images alongside patient data, runs TensorFlow inference, and returns structured risk predictions applying design patterns for clean separation of concerns and maintainable code.
- Wrote unit and functional tests using xUnit-style assertions with mocks and stubs to verify model inference accuracy across edge cases and preprocessing variants, improving code coverage for the inference pipeline.

StudiMate -AI-powered Learning Planner <https://github.com/PavanSai008/StudiMate>

- Designed and implemented an automated test verification system that validates user-submitted task completions by analyzing uploaded images, achieving ~85% accuracy across test cases with structured pass/fail reporting.
- Developed test scripts and automation procedures for the API service layer, validating response correctness under varied inputs and documenting failure scenarios encountered during QA cycles.
- Tracked quality metrics using telemetry from test users, iterating on test coverage and validation logic to drive operational excellence and improve system reliability over successive builds.

CERTIFICATIONS & ACHIEVEMENTS

- NPTEL Software Conceptual Design
- NPTEL Internet of Things (IoT)
- Hands-on experience in API testing, request validation, and automation using Postman
